Effects of this medicine

This medicine suppresses actions of allergic substances (histamine) or inflammatory substances and improves allergic symptoms.

It is usually used to treat bronchial asthma, allergic rhinitis, hives and eczema/dermatitis.

Before using this medicine, be sure to tell your doctor and pharmacist

- If you have previously experienced any allergic reactions (itch, rash, etc.) to any medicines.
If you have hepatic disorder or have a history of it.
- If you are pregnant or breastfeeding.
- If you are taking any other medicinal products. (Some medicines may interact to enhance or diminish medicinal effects. Beware of over-the-counter medicines and dietary supplements as well as other prescription medicines.)

Dosing schedule (How to take this medicine)

- Your dosing schedule prescribed by your doctor is((to be written by a healthcare professional))
- For bronchial asthma, hives, eczema/dermatitis, cutaneous pruritus, prurigo or psoriasis vulgaris accompanied by itching: In general, for adults, take 1 tablet (20 mg of the active ingredient) at a time, once a day.
For allergic rhinitis: In general, for adults, take 10 to 20 mg of the active ingredient at a time, once a day. This preparation contains 20 mg of the active ingredient in a tablet.
In any case, the dosage may be adjusted according to the age or symptoms. Strictly follow the instructions.
- If you miss a dose, take the missed dose as soon as possible. However, if it is almost time for the next dose, skip the missed dose and follow your regular dosing schedule. You should never take two doses at one time.
- If you accidentally take more than your prescribed dose, consult with your doctor or pharmacist.
- Do not stop taking this medicine unless your doctor instructs you to do so.

Precautions while taking this medicine

- This medicine may cause drowsiness. While taking this medicine, pay close attention when operating dangerous machinery, such as driving a car.

Possible adverse reactions to this medicine

The most commonly reported adverse reactions include edema (face or limbs), rash, hives, itch, pruritic erythema, drowsiness, dizziness, nausea, dry mouth, frequent urination and bloody urine. If any of these symptoms occur, consult with your doctor or pharmacist.

The symptoms described below are rarely seen as initial symptoms of the adverse reactions indicated in brackets. If any of these symptoms occur, stop taking this medicine and see your doctor immediately.
